

# TWIST

The TWIST is a simple to use joystick that allows you to easily maneuver your boat in close quarters.

Anchor Winch

Power ON/OFF

Function

Take Command

Joystick Engines & Thrusters  
& Push To Sound Horn

Audible & Vibration Alarm

LED Low Battery / Charge

Bow Thruster

Stern Thruster

LED Radio Status

- The joystick lets you move in any direction. It's as easy as pointing the joystick where you want to go. Adds Joystick capability on shaft line and fixed outboards.
- For boats with 1-2 inboards and up to 6 outboards (requires bow thruster).
- **Soft Docking:** The perfect kick every time with just simple tap of the joystick. Dockmate is fully customizable to safely "bump" the engines enabling a perfect consistent engagement of the powertrain as specified by you. This enables you to dock and maneuver your boat with confidence every time.
- **Throttle+:** For those times when there is wind and or current, a little more than Idle speed is required to safely maneuver your boat. Throttle + gives you a preset "burst" of throttle when you need it. Optional fully proportional throttle is available.
- **Walk the boat** sideways to and from the dock. With or without a stern thruster.
- The thrusters can be fully incorporated into the joystick as well as accessed individually through the keypad.
- 3 Year Parts & 1 Year Labor Warranty
