Interface for Dockmate and Yachtcontroller

With the EVC release week 49 2019, we have added two supplier codes in the EVC system for Dockmate and Yachtcontroller. Those manufacturers will also get the possibility to buy interfaces to EVC of the same type as XENTA.

The interfaces will give them access to shift and limited throttle (1400 rpm) and they work together with EVC E and EVC 2 upgraded to the latest software (week 49 2019).

If there is a failure in the external system, the interface makes sure that you always can take over and drive with the EVC controls.

The interface has no Volvo Penta part number and is delivered directly to the 3rd party manufacturer (in the same way as the autopilot interface). The 3rd party supplier is responsible for spare parts.

Note:
Dockmate has published a press release that their product is approved by Volvo Penta. This is not correct, Volvo Penta has not approved neither one of those products and don't intend to do that either. We sell them an interface but can and will not take any responsibility for the function of their product.
